Insta Telecom Limited offers various Internet Connectivity solutions as per your convenient, type of use and monthly budgets. These solutions are designed after a through survey for internet users in Afghanistan and based on latest industry trends and technology available. Our team of expert R&D engineers keep working on Research & Development aspect to be always updated and at Insta Telecom, we keep investing more into hardware and software to provide you smooth, faster and interruption free internet on more cheap and cheap prices as feasible.

Insta Telecom Offers following internet related services in Afghanistan ;

- ▣ DSL Broadband Internet Connection
- ▣ Internet thru Prepaid Cards
- ▣ Wireless Broadband Internet Connection
- ▣ VSAT Solutions : Satellite Internet Services
- ▣ Virtual Private Networks (VPN) Solutions

▶ DSL BROADBAND INTERNET SERVICES

With the tremendous growth in Internet usage, the need to provide faster connection speeds continues. Traditional technologies such as modems can often not provide the desired increase in speed (bandwidth). A number of new technologies are being developed with DSL, that provides high speed over existing telephone cabling becoming increasingly popular. Insta Telecom has gained valuable experience and knowledge about DSL and we have deployed all latest available technology and equipment to provide our customers high speed networks. (see how DSL Internet Works)

▶ What is DSL Internet?

DSL refers to a class of technology used to obtain more bandwidth over existing copper telephone cabling running between a customer's premises and a Telco's Central Office. DSL allows simultaneous voice and high-speed data services such as super fast Internet access over a single pair of copper telephone wires.

▶ What is Special about DSL Internet?

The cables connecting most households to the phone network are mainly simple twisted pair copper wires, which have only been able to carry analogue traffic. Modem speeds have gradually increased through the use of various compression and other techniques, but at today's fastest (56 kbit/s) they are approaching the theoretical limit for this technology.

DSL technology enables much higher speeds across the twisted pair lines from the Central Office to the home, school or business. Speeds up to 2 Megabits per second are achievable in some areas - 30 or more times faster than today's fastest modems. This means that some consumers and tele-workers will be able to use applications that need these higher speeds even if high performance (fiber) cable networks are not available in their location.

▶ What are the main benefits of connecting to the Internet via DSL?

DSL can provide virtually instantaneous transmission of voice, data and video over ordinary copper phone lines. A DSL connection can eliminate the frustrating delays associated when waiting to download information and graphics from the Internet. It provides residential subscribers with a cost effective uninterrupted high speed Internet connection. For schools, businesses and branch offices, DSL provides fast access to mission-critical information on corporate Intranet servers and the Internet. Another significant benefit is that a DSL connection is always on-line (like a LAN connection) with no waiting time for dialing or connecting.

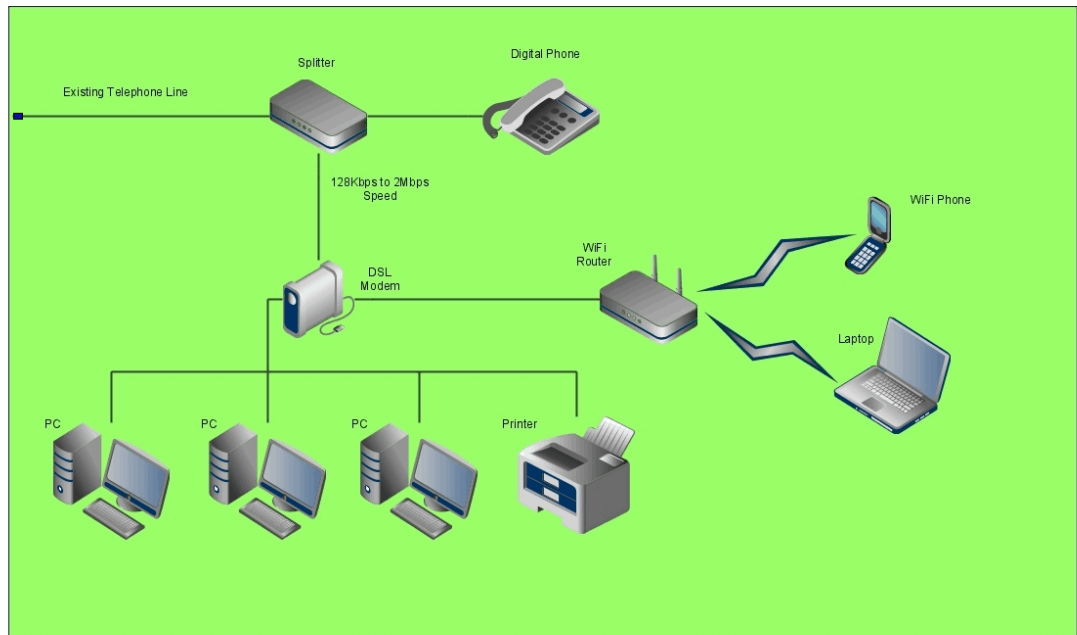

▶ HOW DSL BROADBAND INTERNET WORKS !

DSL Internet require normal working Telephone Line. A Splitter is added to our normal telephone line - which makes sure that your telephone keep working as it is. So your normal telephone line do not get disturbed by installation of DSL Internet.

You have option to add more computers over LAN (Local Area Network) by using simple LAN Switch, which will connect your more computers and printers thru cable. While you can also add WiFi (Wireless) Router to your DSL, so you can use your Wireless enabled devices like Laptop, WiFi enabled Phone etc. thru your WiFi Router.

So all you make this internal network just backed by Insta DSL internet connection and you can get speed (bandwidth) tailored to your requirements.

▶ INSTA PREPAID CARDS

Insta pre-paid Internet card service allows customers to access the Internet from any telephone line, eliminating the need to subscribe for an account with Insta Telecom.

These convenient, easy to use cards give you instant high - speed internet access.

Wireless networking is a more modern alternative to wired networking that relies on copper/fiber optic cabling between network devices. It's the better solution for internet connection in Afghanistan because of not having proper conventional telephone infrastructure.

That's why it is rapidly gaining popularity for both home and business networking. Wireless technology continues to improve and the cost of wireless products continues to decrease.

Insta has joined hands with Motorola canopy advantage technology for providing the best services to its clients in the region. The Canopy Advantage platform is the next generation of Motorola's wireless broadband access infrastructure. With this new platform, Canopy equipment users can simultaneously enjoy the strengths of the original Canopy product coupled with dramatic improvements in throughput and latency.

With the Canopy Advantage platform, Insta can now offer premium services wirelessly (such as VoIP and video) as an alternative or extension to DSL or T1/E1 services. Insta through Canopy advantage platform can support distance learning, video conferencing or high-speed data transfer securely and at a fraction of the cost of subscribing to traditional wired services. The Canopy Advantage platform is built on the field proven Canopy system and includes the high level of interference tolerance, scalability, signal reliability and ease of installation inherent in all Canopy equipment. Building on these strengths, the Canopy Advantage platform provides the following enhancements.

Salient features are :

- Higher performance
- Faster speeds
- True quality of service
- Comprehensive multi-services platform
- Seamless integration

▶ WIRELESS BROABAND : Who is it suitable for?

▶ We are renting

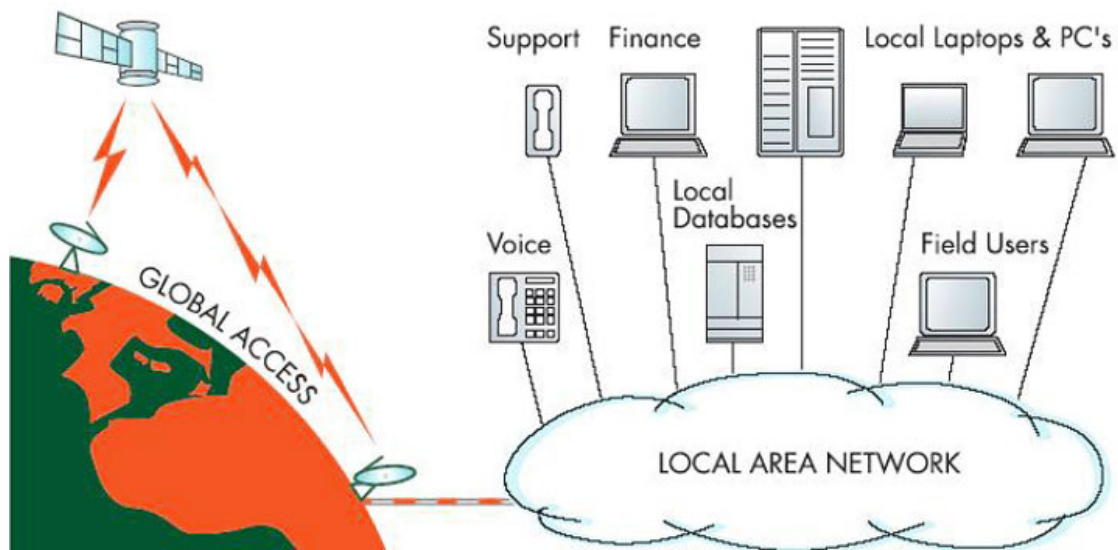

Insta Wireless Connection will move with you. So while you're waiting for your phone line, gas, or other utilities to be connected, your internet connection is ready to go from the first moment you walk through the door.

▶ I don't have a phone line

Insta Wireless operates free of the old phone network, so you never need to install a phone line in order to access the internet on your PC or Laptop.

VSAT Technology represent a cost effective solution for users seeking an independent communications network connecting to the global internet. VSAT networks offer value-added satellite-based services capable of supporting not only access to the Internet, data, LAN, voice/fax communications, but also providing powerful, dependable private network communications solutions.

- ▣ High Bandwidth Internet Connectivity Solution
- ▣ No Phone Lines Required, No Dial-Up, "Always On"
- ▣ Ideal for Broadband rather than Mission Critical Applications

Since good service is our priority, we spare no expense in ensuring unsurpassed standards Network, rest assured you'll enjoy high reliability and excellent data quality. Not only that, our Intelligent Network gives you a greater peace of mind as network security is guaranteed. As an added convenience and flexibility, you can view your traffic expenses through the Internet.

Salient features are :

- User-friendly interface to keep a close eye on your network expenses and track your traffic trends
- One-stop, end-to-end managed data network solutions.
- Single point of contact for provisioning, commissioning and maintenance issues.

“Insta has a clear single-minded focus to deliver the superior customer services experience, to the clients and we believe that we are making your lives simpler and easier”

Insta Telecom is proud to have recruited the best staff, trained in various aspects of networking, systems engineering and marketing. Insta Telecom personnel bring together a broad range of skill, garnered through careers in the ISP and software engineering industries. This talent pool provides invaluable experience and insight into the operation of networks across the country. Ultimately customer gets quality services and satisfaction.

Insta provide customer services support 24/7, from telephone enquiries to visiting demonstrations. Our well qualified staff is ready to help you in your time of need, so please don't hesitate to contact us as soon as you need help.

We are also proud to initiate the well trained and skilled customer service staff in Afghanistan in telecommunication sector. We invest hard just for our customer satisfaction. We have deployed Trouble Ticket System which always ensure that No Complain is missed or overlooked. System issues an auto-generated Trouble Ticket Number, which is token of best service. You trouble ticket will not be closed by Auto-System unless resolved within a specified time-frame.
